No more paper, all digital

PFREUNDT Load & Go – Advantages

The next step in digitizing your operating processes – simply through the driver's smartphone.

With the Load & Go web app from PFREUNDT, the entire order process can be viewed digitally and in real time by everyone involved – from **selecting the order to loading and weighing data acquisition and on to unloading and generating the delivery slip**. Reducing manual operations boosts the efficiency of order processing.

Digital delivery slip - no more paper chase!

Weighing data acquisition and the signature are both done digitally and can be viewed at any time.

The risk of accidents is reduced because the truck driver no longer has to get out of the truck on site.

PFREUNDT Load & Go functions

"Become more efficient – we support you with sensible technology and experienced professionals."

THIS IS HOW EASY IT IS FOR THE DRIVER WITH PFREUNDT LOAD & GO

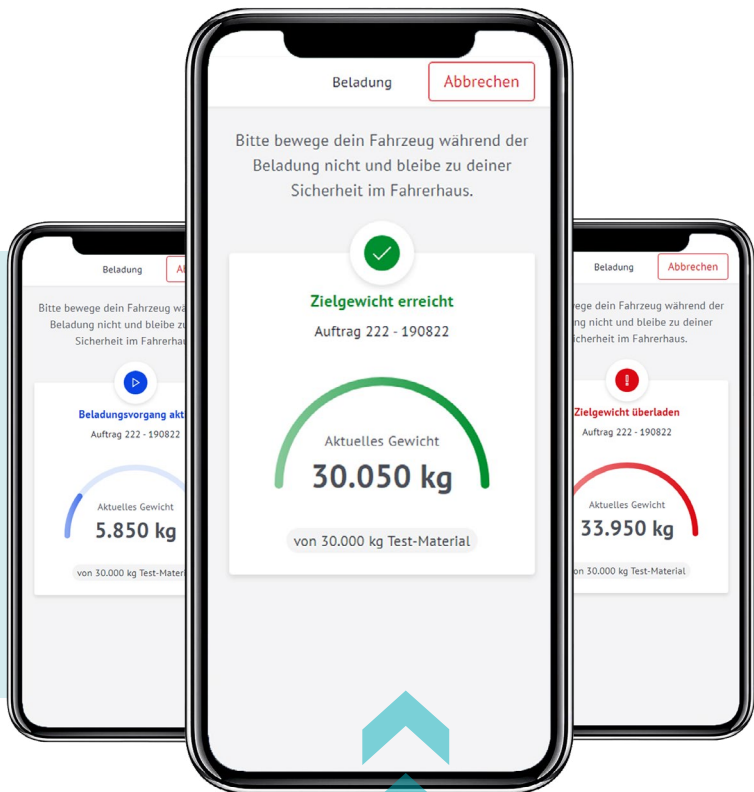

1. Select order

- The truck driver sees the orders scheduled for him for the day in the PFREUNDT Load & Go app.
- When the truck driver arrives at the plant, he selects the appropriate order and can see all the order data that is relevant for him.
- Loading begins and the weighing data is acquired digitally with the PFREUNDT WK60 weighing electronics.

2. Follow loading live

- The truck driver follows the loading on his smartphone in real time and has full transparency of the correct load quantity.
- The truck driver and machine operator see exactly the same weighing data throughout the loading process.

3. Confirm digitally

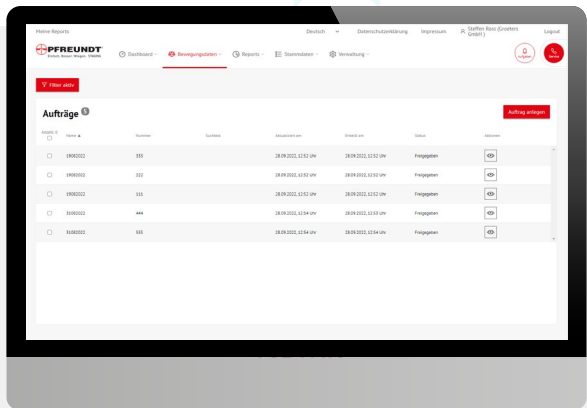

- **Digital LOADING delivery slip**
The truck driver confirms the weighing data with a digital signature on his smartphone and completes the process.
- **Digital UNLOADING delivery slip**
The customer confirms receipt of the load with a digital signature directly on the truck driver's smartphone.

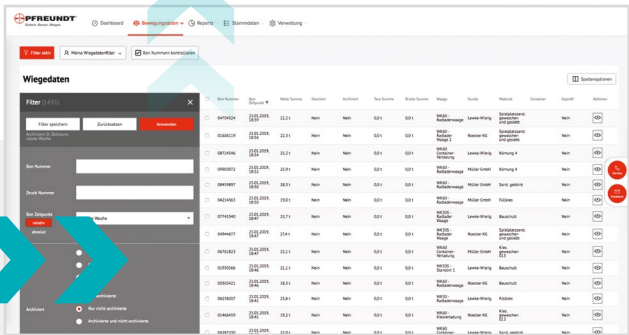

IN THE BACKGROUND THE COMPANY IS WORKING WITH THE PFREUNDT WEB PORTAL

Enter and schedule orders

- The order dispatcher enters the complete order data in the PFREUNDT web portal.
- The web portal transfers the data both to PFREUNDT Load & Go and to the PFREUNDT WK 60 weighing system. In this way the truck driver and the wheel loader driver both have exactly the same data.

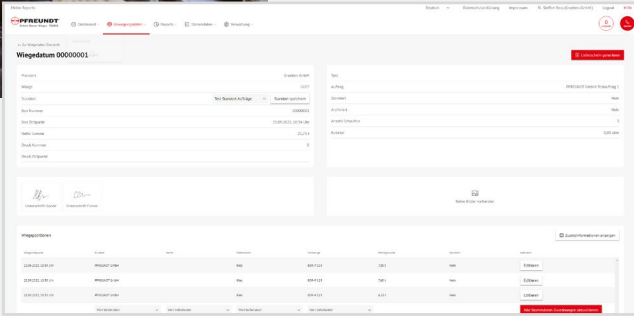

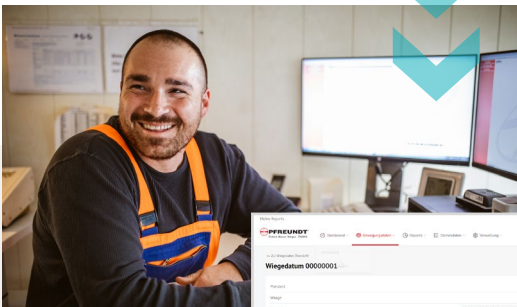

Receive and transmit weighing data in real time

The WK60 directs weighing data to the web portal in real time and transfers the data in parallel to Load & Go.

Enter and schedule all orders and data digitally in one place

- Load & Go transfers the delivery slips together with digital signatures directly to the web portal.
- Each step in the process, from scheduling the order to weighing data and on to completing the order, is documented and archived.
